Srikanth Bommadi
DevOps/ Site Reliability Engineer
+1 (302)-525-9755 | bommadisrikanth2@gmail.com | https://github.com/SrikanthBommadi

PROFESSIONAL SUMMARY:

- Overall 5+ years of experience in automating, deploying, and operating highly available systems across Cloud Computing, SRE, DevOps, Systems Administration, and SCM, supporting both data and application platforms.
- Strong experience with SCM and **Agile** delivery tools including **Git**, **Bitbucket**, **SVN**, and **Jira**, supporting branching strategies, release management, and coordinated production deployments across **Linux**/**UNIX** and Windows environments.
- Extensive hands-on experience with **AWS** cloud services including **EKS**, **ECS**, **EC2**, **VPC**, **IAM**, **S3**, **RDS**, **Lambda**, **SQS**, **Auto Scaling**, **ELB**, **Route53**, **CloudWatch**, **CloudTrail**, and **CloudFormation**, designing scalable and fault-tolerant architectures.
- Practical experience with **Azure** infrastructure and security services such as **VMs**, **AKS**, **VNet**, **Azure SQL**, **Load Balancer**, **Storage Accounts**, **Azure AD**, and **RBAC**, ensuring secure and reliable cloud operations.
- Strong expertise in Infrastructure as Code using **Terraform**, **AWS CloudFormation**, and **AWS CDK** (Python), building reusable modules and enforcing security guardrails and operational standards.
- Hands-on experience developing **Python**-based **AWS Lambda** functions for automation, event-driven workflows, and operational tooling, leveraging libraries such as **boto3** for AWS service integration, requests for API interactions, **pandas** and **NumPy** for data processing, and **PyYAML** for configuration handling to improve reliability and reduce manual effort.
- Proven experience in **Docker** containerization and **Kubernetes** orchestration (**Amazon EKS**, **OpenShift**), including cluster provisioning, upgrades, networking, security, and high availability for microservices workloads, with centralized cluster management using **Rancher**.
- Implemented enterprise **CI/CD** and release strategies using **Jenkins**, **ArgoCD**, and **Spinnaker**, **enabling blue-green** and zero-downtime deployments with automated rollback and controlled canary releases.
- Applied DevSecOps practices by implementing **SAST**, **DAST**, dependency, container, Infrastructure as Code (**IaC**), and compliance scans within CI/CD pipelines using tools such as **SonarQube**, **Veracode**, and **Trivy** to ensure secure, reliable, and production-ready cloud deployments.
- Applied SRE best practices by defining **SLIs**, **SLOs**, and **SLAs**, implementing observability using **Prometheus**, **ELK**, **Dynatrace**, **Splunk**, and **CloudWatch**, **performing RCA**, and collaborating closely with cross-functional teams in production environments.
- Supported reliability and availability improvements by defining and monitoring **RPO**, **RTO**, **MTTR**, and **MTTF** metrics, supporting **disaster recovery planning**, incident response, and continuous service reliability across production environments.

EDUCATION:

- Master of Science in **Information Systems** from Wilmington University, Wilmington, DE. **Aug 2022 - June 2024**
- Bachelor of Technology In **Computer Science** from JNTUH, Hyderabad, India. **May 2016 - March 2021**

CERTIFICATIONS:

- AWS Certified Cloud Practitioner
- AWS Solutions Architect Associate
- HashiCorp Certified: Terraform Associate
- Certified Kubernetes Engineer (CKE)

TECHNICAL SKILLS:

CI/CD Tools	Jenkins, GitLab CI, CircleCI, ArgoCD
Cloud Platforms	AWS, Azure, GCP
Programming	Python, Java, Shell,
Containerization	Docker, Kubernetes, OpenShift, AKS
IaC Tools	Terraform, CloudFormation, Ansible
Database	Oracle, MySQL, SQL Server, PostgreSQL, MongoDB
Containers	Docker, Kubernetes, Helm
Scripting	Bash, Python, Groovy
Monitoring	Prometheus, Grafana, ELK Stack, Datadog
Source Control	Git, GitHub, Bitbucket
OS & Servers	Linux (Ubuntu/CentOS), Nginx, Apache
Versioning	Semantic Versioning, Git Flow

PROFESSIONAL EXPERIENCE:

Air Canada – Philadelphia, PA **July 2024 to Present**
DevOps Engineer

Responsibilities:

- Facilitated **Agile ceremonies** and collaborated with cross-functional teams to plan and execute production releases, ensuring smooth deployments and uninterrupted business operations.
- Modernized workflows by developing **Shell scripts** to automate cron-based backups and **Python scripts** for AWS Lambda functions handling flight cancellations and customer notifications, resulting in more reliable operations and timely updates.
- Digitized system configuration and automated security patching using **Ansible**. Managed service recovery, software installations, and connectivity setups ensuring stable, compliant environments.
- Managed AWS infrastructure via **Terraform**, covering networking, compute, and storage. Ensured consistent, repeatable deployments with robust state management, reducing provisioning time.
- Containerized applications with **Docker**, migrated images to **Amazon ECR**, stored versioned artifacts in **JFrog**, and optimized infrastructure across environments to reduce downtime and speed up system recovery.
- Engineered custom Helm charts and **Kubernetes Operators using CRDs** to standardize microservice deployments, automate lifecycle management, and reduce environment drift across critical airline operations systems.
- Implemented **Kafka-based asynchronous messaging** for microservices communication and **Redis caching** to improve system scalability, responsiveness, and data access performance.
- Implemented **Jenkins CI/CD** pipelines for **Java, Python, and Go** services, integrated **SonarQube** for code quality and **Aqua**, **Veracode**, and **Trivy** for security scanning to accelerate releases and harden application security.
- Leveraged **Istio** to manage traffic, enforce mTLS and authorization, and automate deployments with Helm and GitOps enhancing performance, reliability, and observability.
- Utilized ArgoCD for GitOps to ensure continuous drift detection and automated remediation, maintaining consistent and reliable infrastructure states across critical airline systems.
- Integrated the ELK stack (Elasticsearch, Logstash, Kibana) for centralized log aggregation and analysis, improving root-cause detection and reducing resolution time across critical airline systems.
- Configured **Prometheus and Grafana** for metrics collection and visualization, and integrated **Alertmanager with PagerDuty and Slack** for real-time incident alerts, improving KPI visibility and reducing MTTR across critical airline systems.

Environment:

Git, Unix/Linux, Python, Groovy, SQL | Docker, Kubernetes, OpenShift, Helm | Jenkins, Maven, Nexus, JFrog, ArgoCD | Kafka, Redis | Ansible, Terraform, CloudFormation | Prometheus, Grafana, ELK, Splunk | AWS (EC2, EBS, S3, VPC, RDS, ELB, Auto Scaling, CloudWatch, SNS, ElastiCache)

eHealth - Dallas, Texas **Nov 2022 to June 2024**
Site Reliability Engineer

Responsibilities:

- Automated **HIPAA-compliant CI/CD pipelines** using **Jenkins, Trivy, Aqua Security, and SonarQube**, ensuring continuous PHI protection and preventing regulatory drift across environments.
- Architected and designed **high-availability, low-latency AWS infrastructure and Amazon EKS clusters** for telemedicine and remote patient monitoring platforms, enabling **real-time vitals streaming and 24/7 clinical care delivery**.
- Deployed and managed **containerized healthcare workloads** using **Docker and Helm**, standardizing environments for biometric data processing, diagnostics, and clinical trial applications.
- Built and maintained **disaster-recovery automation** using **Terraform and Ansible**, supporting **near-zero RTO/RPO** and ensuring data integrity for **electronic health records (EHRs)**.
- Integrated **Prometheus, Grafana, and the ELK Stack** for compliance-driven observability and centralized logging, improving **SLA adherence** and reducing **incident resolution time by 30%**.
- Streamlined analytics and reporting dashboard deployments through **Jenkins CI pipelines and ArgoCD GitOps**, reducing **release cycles by 35%** while maintaining full **audit visibility**.
- Worked on **AWS IAM, KMS, Secrets Manager, and encryption standards** to secure PHI data and meet **healthcare compliance requirements**.
- Supported **production Amazon EKS operations**, including **scaling, cluster upgrades, security hardening, and workload reliability** for critical healthcare services.

- Utilized **Rancher** for centralized Kubernetes cluster management, **Spinnaker** for continuous delivery and controlled rollouts, and **Jira Service Management** for incident tracking, change management, and coordinated on-call response workflows across healthcare platforms.
- Worked on **Auto Scaling, Application and Network Load Balancers, and Multi-AZ deployments** to handle variable telemedicine traffic and ensure **high availability**.
- Supported **blue-green and canary deployments** to minimize risk and downtime during healthcare application releases.
- Led **cost optimization initiatives** using tagging strategies, autoscaling, and usage analysis while maintaining performance for **patient-facing systems**.
- Supported **disaster-recovery drills and failover testing** to validate **business continuity** for critical patient-care platforms.

Environment:

AWS, Amazon EKS, Kubernetes, Docker, Helm, Rancher, Spinnaker, Terraform, Ansible, Jenkins, ArgoCD, GitOps, Linux (RedHat 7/8), Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), AWS IAM, KMS, Secrets Manager, Auto Scaling, Application & Network Load Balancers, Git, Jira Service Management

Heeddata - Hyderabad, India **April 2020 to March 2022**
Cloud Engineer

Responsibilities:

- Facilitated Agile cloud projects, ensuring scalable architecture, continuous optimization, and **stable production operations** through automation and best practices.
- Designed and maintained **resilient AWS environments** using **Infrastructure as Code (IaC) with Terraform**, enabling high availability and performance across compute, networking, and security layers.
- Strengthened security posture by implementing **secure credential management** using **AWS Secrets Manager and SSM Parameter Store**, aligning with audit and compliance standards.
- Employed **Terraform and Git-based IaC workflows** to enable version control, team collaboration, and **safe infrastructure rollbacks** across environments.
- Crafted and deployed **fault-tolerant AWS infrastructures** (EC2, S3, VPC, RDS), supporting **high availability and scalable application workloads**.
- Implemented **AWS Identity and Access Management (IAM) policies** across 50+ cloud resources, enforcing least-privilege access and reducing potential security exposure by **approximately 60%**.
- Orchestrated **containerized workloads** using **Amazon EKS (Kubernetes) and Amazon ECS (Docker)**, ensuring efficient scaling, high availability, and optimized resource utilization.

Environment:

AWS, Terraform, Git, Jenkins, Maven, Unix/Linux, Ansible, Docker, Kubernetes (EKS), Amazon ECS, AWS IAM, EC2, S3, VPC, RDS, Load Balancers, Auto Scaling, AWS Secrets Manager, SSM Parameter Store.
